

## SKIN SERIOUSLY.

### Care of a Shave Biopsy Site and Punch Biopsy Site

You may remove the bandage strip tomorrow morning.

Wash the area with mild soap and warm water.

Apply a thin layer of Vaseline or Aquaphor and cover with a fresh bandage. Do not use antibiotic ointment (Neosporin, Polysporin, Triple antibiotic ointment, or Bacitracin.) Many people develop allergic reactions to these products and it is difficult to distinguish this from an infection while the wound is healing.

Continue this routine for one week.

If you notice any drainage or increased swelling 3-5 days following the procedure, please call the office.
